- ☒ 13A. Exhibit A, Origin and Breeding History of the Variety (See Section 52 of the Plant Variety Protection Act.)
- ☒ 13B. Exhibit B, Novelty Statement.
- ☒ 13C. Exhibit C, Objective Description of the Variety (Request form from Plant Variety Protection Office.)
- ☒ 13D. Exhibit D, Additional Description of the Variety.

14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed?  
(See Section 83(a). (If "Yes," answer 14B and 14C below.) ☐ YES ☒ NO

14B. Does the applicant(s) specify that this variety be limited as to number of generations?

☐ YES ☐ NO

14C. If "Yes," to 14B, how many generations of production beyond breeder seed?

☐ FOUNDATION☐ REGISTERED☐ CERTIFIED

15. Does the applicant(s) agree to the publication of his/her (their) name(s) and address in the Official Journal?

☒ YES☐ NO

16. The applicant(s) declare(s) that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate and will be replenished periodically in accordance with such regulations as may be applicable.

The undersigned applicant(s) is (are) the owner(s) of this sexually reproduced novel plant variety, and believe(s) that the variety is distinct, uniform, and stable as required in Section 41, and is entitled to protection under the provisions of Section 42 of the Plant Variety Act.

Applicant(s) is (are) informed that false representation herein can jeopardize protection and result in penalties.

Origin and Breeding History of the Variety

BANFF

~~Freezer~~ 47 originated from a hand pollinated cross between Preperfection and B 104-3-1. Preperfection is a canning pea variety developed by Pure Line Seeds and used extensively by the canning trade for the past ten years. B 104-3-1 is a line of peas developed at Oregon State University by Dr. James Baggett and is resistant to Pea Enation Mosaic Virus and Powdery Mildew. It also possesses some tolerance to Western Pea Streak.

This cross was made in 1963 at Moscow, Idaho in trial grounds operated by Pure Line Seeds. Selections of this variety were made in the F2 through the F8 generations with stability occurring in the F8 generation. This variety has been tested in small plots and small field tests in Washington, Wisconsin, Idaho and in Europe.

This variety throws a sterile rogue which occurs about one plant in 60,000 plants.

## EXHIBIT B

~~Freezer 47~~ BANFF most nearly resembles the pea variety Sprite in most respects. Both varieties are quite similar in maturity except in some comparative tests ~~Freezer 47~~ BANFF has been one day earlier in reaching 100 tenderometer. The berry size of ~~Freezer 47~~ BANFF is larger at prime freezing stage than Sprite. The vine height of ~~Freezer 47~~ BANFF averaged 58 cm. as compared to 52.75 for Sprite. ~~Freezer 47~~ BANFF will produce 70 - 90 percent double pods at each peduncle where Sprite will normally be 0 - 10 percent. As a result, ~~Freezer 47~~ BANFF has given superior yields of high quality peas to Sprite in comparative tests. The relatively short vine of ~~Freezer 47~~ BANFF combined with its yield potential for an early variety gives an excellent pea-vine ratio for the food processor.

## INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

## ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.
- 13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.
- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.
- 14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)
